Accessing RADx Data in the NIH RADx® Data Hub

To gain access to study data, you will need to request access in dbGaP. Follow these steps:

1. Log into the RADx Data Hub using the **same eRA** or **NIH Login** you use for dbGaP.

2. Locate a study using the **Study Explorer** and click on the **Study Name** to go to the **Study Overview** page.

3. Click on the **dbGaP Study Accession** in the Study Info box on the Study Overview page. This will bring you to the **Study Overview page in dbGaP.**

4. In dbGaP, submit a **data access request** for the study. Use the **Important Links and Information section** in dbGaP for guidance to request study access.

5. Once you receive a study access confirmation email from dbGaP return to the RADx Data Hub, login using the **same eRA** or **NIH Login** as for dbGaP, and begin to analyze data.
